PROFESSIONAL CONCRETE PLACEMENT SERVICES

CONCRETE PUMPS + RESIDENTIAL PLACEMENTS

FASTER PLACEMENT: No need to keep moving mixer trucks around the edge of the slab or footing. A pump truck operator move the boom anywhere to place the concrete as directed.

EASE OF PLACEMENT: No wheelbarrows or rakes needed to drag the concrete 6-7 feet from the discharge point of the truck chute.

AVOID SOFT GROUND: No one wants to pay for a tow truck to pull out a concrete mixer stuck in soft and muddy ground.

NO MUDDY MESS: Mixer trucks will pick up a lot of mud and spread it all over the paved streets in residential areas.

TALL RESIDENTIAL WALLS: Custom built homes can have tall privacy walls around the whole property. It can be almost impossible to pour into a narrow wall form that is higher than the truck chute. A concrete pump truck makes the pour simple and fast, and minimizes the mess of concrete spilling over the sides of the wall forms.
